Atto Pharma
MANUFACTURING SIMPLIFIED

ATTO PHARMA EBMR · ELECTRONIC BATCH MANUFACTURING RECORD

Your approved BMR to a trained, certified team. No implementation project.

Load the BMR your QA already approved and its screens are ready the same day. Your people learn their own role on their own devices, rehearse in waves, and go live through OQ and PQ with QA and IT signing each step.

Load 1	Learn 2	Certify 3	Rehearse 4	OQ 5	PQ & go live 6
Your approved BMR, as it is. Screens generated in minutes.	Each role studies its own path: guides, videos, manual, agents.	Exams by role, in English or the local language.	Practice batches, then the team rehearses in waves for 2–3 days.	Validation batches on the QA site; QA and IT approve.	Promoted to production; PQ, then real batches.

No implementation, no customisation

The eBMR reads your own approved BMR and builds its screens: every entry, limit and signature, in your BMR's order. Nothing to configure or code; a revised BMR is a new version, compared and approved.

One BMR, every process area

Extend an approved BMR to another process area of the same block in a guided draft: equipment matched, every limit with its reason, reviewed and approved under your change control.

Training built into the app

- **A study guide for every module**: everything its exam asks, lesson by lesson, with worked examples and self-checks.
- **Your path by role**: modules in order, then the certificate, the rehearsal and real batches.
- The **user manual**, help guides and videos for every screen, on any device, at their own pace.

In your people's language

- Exams in **Telugu, Hindi and Tamil**; more languages can be added.
- Your QA Head approves each translation; English stays beside it as the record.
- **Read aloud** for questions in English.

Training waves for hundreds of people

- Waves by line and shift, with coaches and dates for start, rehearsal and go-live.
- A practice batch for each person; the coach signs off practice and rehearsal.
- Reminders by email, progress per wave, and **station cards** with a QR code to each screen's guide.

Rehearsals from your own BMR

- Scripts made from your BMR's screens: who does each step, on which screen, whose signal to wait for.
- Larger teams and long, many-lot records handled; each person checks their screens on paper and on the day.

An agent for every role

My role answers each person: what to study, in what order, which screens they use and why. **Company Admin** helps your administrator with roles, screens and certifications; Help agents answer from the manual and guides.

Ready before anyone signs

Each role sees its own screens. On QA and production, your company can require the role's certificate, and a rehearsal, before anyone signs a real record: the system refuses otherwise and says why.

Validated the way your auditors expect

Three sites (development, QA, production) with OQ and PQ; 21 CFR Part 11 electronic signatures with a password, a complete audit trail, the doer never the checker, and nothing deleted. Designed around GAMP 5 and EU GMP Annex 11.

Start with a 14-day pilot on your own BMR.

Sign up, load your BMR, see your screens the same day.
